

Today 10:41 AM

I want to create website to share AI learning roadmap, can you help to create an interactive web site for new and beginners from small child teenagers colleges office worker to real ill and retirees so we need to group them in tiers and cater the training to fit their lifestyle and learning need. Can you draft the plan and structure then the mockup

This is a strong idea. Most AI learning sites organize content by **technology** ("Learn ChatGPT", "Learn Python"), but beginners actually think in terms of **their life**.

Instead of asking "*What AI model should I learn?*", they ask:

- "I'm 10 years old. What can AI do for me?"
- "I'm a university student. How can AI help me study?"
- "I'm an office worker. How can AI save me 2 hours a day?"
- "I'm retired. Can AI help me enjoy life and stay connected?"

That makes your website fundamentally different.

Vision

AI Roadmap

Learn AI based on your lifestyle, not your technical background.

Everyone starts at a different point.

The website adapts the learning journey based on:

- Age
- Occupation
- AI experience
- Goals
- Available time
- Preferred learning style

Target Users

Tier 1 — Kids (5–10)

Goal

- Curiosity
- Creativity
- Safe AI

Learning

- Draw with AI
- Story generation
- Animal quiz
- AI games

Reward

Badges

Stars

Simple certificates

Tier 2 — Teenagers (11–17)

Goal

- Homework
- Coding
- Creativity

Roadmap

Week 1

What is AI?

Week 2

Prompting

Week 3

Long-Term Vision

This could evolve into an **AI Learning Operating System** rather than just a course website. Every learner would receive a dynamic roadmap that adapts as AI tools evolve, recommends the next best lesson, tracks real-world projects, and connects them with a community at the same stage. Over time, the platform could also issue verified skill badges, recommend role-specific learning (for example, Supply Chain, HR, or Marketing), and become a trusted guide for lifelong AI education across generations. Given your background leading supply chain operations and your interest in making AI practical for everyday work, a specialized **Supply Chain AI Roadmap** could become one of the platform's signature learning paths.

     ...  Sources

It's a Great idea how to do that

I think the key is to **build it like Google Maps, not like a textbook.**

People don't want 500 lessons—they want to know **"Where am I now, and what's the next step?"**

Phase 1: Validate the Idea (2–4 weeks)

Don't build the whole platform first.

Instead, build a simple website with:

- A homepage explaining the concept
- A "Choose Your Path" quiz
- 5–10 sample learning roadmaps
- An email signup to gauge interest

Your goal is to answer:

- Which audience signs up the most?
- Which learning paths are most popular?
- Where do people stop?

Phase 2: Design the Learning Framework

Think of the platform as three layers.

Layer 1: Who are you?

Users choose:

-  Child
-  Student
-  Office Worker
-  Manager
-  Business Owner
-  Retiree

Layer 2: What do you want to achieve?

Examples:

- Save time
- Learn AI basics
- Get a better job
- Build a business
- Create content
- Learn programming
- Improve productivity

Layer 3: How much time do you have?

- 5 minutes/day

- 15 minutes/day
- 30 minutes/day
- 1 hour/day

The system then creates a personalized roadmap.

Think in "Missions"

Instead of saying:

Lesson 1

Say:

Mission 1

Write your first AI prompt.

Mission 2

Ask AI to summarize an article.

Mission 3

Create your first AI image.

Mission 4

Build an AI assistant.

People enjoy completing missions more than lessons.

Organize Content into Levels

Level 1 – Discover

- What is AI?
- AI safety
- What AI can and can't do

Level 2 – Use AI

- Writing
- Images
- Translation
- Research

Level 3 – Save Time

- Emails
- Meetings
- Documents
- Presentations

Level 4 – Automate

- AI workflows
- AI agents
- No-code automation

Level 5 – Create

- Websites
- Apps
- Businesses
- AI products

Make Every Lesson Interactive

Instead of reading:

"Learn prompting."

Let users practice immediately.

Example:

Try it yourself

Prompt:

"Write a birthday invitation."

The site evaluates:

- ★ Clarity
- ★ Context
- ★ Format
- ★ Tone

Then suggests improvements.

Learning by doing is much more engaging.

Build a Knowledge Graph

Most sites teach in a fixed sequence.

Instead, connect related topics.

For example:

Users can explore naturally rather than following a rigid course.

Add AI Mentors

Different people learn differently.

Offer mentor personalities such as:

- 🧑 Kids Coach
- 🎓 Student Mentor
- 💼 Career Coach
- 📈 Business Advisor
- 🧓 Senior-Friendly Guide

The same topic can be explained in different ways depending on the learner.

Let AI Build the Roadmap

Instead of hard-coding every path:

User profile:

Age: 42

Job: Supply Chain Manager

Experience: Beginner

Time: 20 minutes/day

Goal: Save time at work

The AI generates:

- Week 1: ChatGPT basics
- Week 2: Email writing
- Week 3: Excel with AI
- Week 4: Meeting summaries
- Week 5: Supply chain analytics
- Week 6: Automation

Every roadmap becomes personal.

Technology Stack

I'd recommend:

- **Frontend:** Next.js + React + Tailwind CSS
- **Database & Authentication:** Supabase
- **AI:** OpenAI API (with support for other models later)
- **Hosting:** Vercel
- **Payments:** Stripe
- **Analytics:** PostHog

This stack is modern, scalable, and relatively inexpensive to start.

Monetization

Offer three tiers:

Free

- AI basics
- Limited roadmap
- Community access

Pro

- Personalized AI roadmap
- AI mentor
- Practice exercises
- Progress tracking
- Certificates

Enterprise

- Team learning
- Company dashboards
- Custom learning paths
- Manager reporting

If I were building this

I would build it in four milestones over about six months:

1. **MVP (4–6 weeks):** Homepage, onboarding quiz, personalized roadmap, and 20–30 lessons.
2. **Interactive Learning (6–8 weeks):** AI coach, prompt evaluator, quizzes, and progress tracking.
3. **Community (4–6 weeks):** Profiles, challenges, badges, and discussion spaces.
4. **Growth (ongoing):** Mobile app, multilingual support, AI career guidance, and enterprise features.

One idea that could make this stand out

Instead of calling it an "AI course," present it as an **AI GPS**.

Just like Google Maps asks:

- Where are you?
- Where do you want to go?

Your platform asks:

- Who are you?
- What do you want to achieve?
- How much time do you have?

Then it generates the best route to reach that goal.

That simple shift—from a library of lessons to a personalized navigation system—could make the experience much more approachable for beginners and much more memorable than traditional online learning platforms.

Can you give me html mock up and the plan in mark down format

Below is a starter package consisting of:

1. A **Project Plan** in Markdown
2. A **Homepage HTML Mockup** (single-file HTML)
3. A suggested project structure

1. Project Plan (Markdown)

Markdown

```
# AI Learning Roadmap
```

```
## Vision
```

```
Build an AI learning platform that adapts to each person's lifestyle, age, occupation, goals,
```

```
Instead of asking:
```

```
> "What AI tool should I learn?"
```

```
The platform asks:
```

- ```
- Who are you?
- What do you want to achieve?
- How much time do you have?
```

Then generates a personalized AI roadmap.

| |— footer.html
| |— cards.html
| | hero.html
| |
|— data/
| |— roadmaps.json
| |— lessons.json
| | ai-tools.json
| |
|— README.md
```

#### My recommendation

Rather than building a traditional website, I would build this as a **web application** using **Next.js**, **React**, and **Tailwind CSS** from the beginning. That will let you add user accounts,

AI-generated personalized roadmaps, progress tracking, badges, quizzes, and multilingual support without rebuilding the site later.

I also suggest designing it around an **AI GPS** concept: every visitor answers a few questions, and the site generates a personalized learning route instead of showing everyone the same course catalog. This personalized experience could become the platform's defining feature.

ChatGPT can make mistakes. Check important info.
